Organization Representatives:

We define success as the ability to maximize a student's potential—mind, body, and spirit. Schools shape our future and we take this responsibility very seriously. Our goal is to continuously improve school culture until all students are able to partner with the school to pursue their passion. As a former college football player, I learned how team performance is determined by the quality of that team's culture and climate. Culture is what the team does (practices and procedures) and climate is how the team feels (spirit and motivation). As a result, we develop the rally cry, "We are a thousand passions with one heartbeat." This rally cry reminds us of our responsibility to make our school and community proud by doing our best and helping others. We may be different in many ways, yet our ability to create an environment with love as the central theme is our greatest success.

Dr. Akil E. Ross, Sr.
2018 National Principal of the Year by the National Association of Secondary School Principals and Founder of HeartEd, LLC The United States of America

Pat Yongpradit believes every student should have the opportunity to learn computer science. Pat is the Chief Academic Officer for Code.org, a nonprofit dedicated to promoting computer science education. As a national voice on K-12 computer science education, his passion is to bring computer science opportunities to every school and student in the United States. Throughout his career as a computer science teacher, he inspired students to create mobile games and apps for social causes, and implemented initiatives to broaden participation in computer science among underrepresented groups. As a result, enrollment in his school's computer science program doubled, the number of girls taking advanced computer science tripled, and many of his students went on to majors and careers in computing. Pat has also written and consulted on technology curricula at the local, state and national level and in 2010 was recognized as a Microsoft Worldwide Innovative Educator. In 2013 he was featured in the book "American Teacher: Heroes in the Classroom." He has certifications in Biology, Physics, Maths, Health and Technology education. While Pat currently spends more time focused on CS education from a national perspective, he still continues to find ways to get into the classroom because he will never forget why he got into education: to work with students..

Mr. Pat Yongpradit
Chief Academic Officer of CODE.ORG The United States of America
